## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-93, drawn to a pressure vessel comprising a capsule, classified in class 422, subclass 242.
- II. Claims 94-101, drawn to a method of using a pressure vessel to process at least one material at high temperature and high pressure in the presence of a supercritical fluid, classified in class 117, subclass 11.
- III. Claims 102 and 103, drawn to a metal nitride single crystal, classified in class 117, subclass 952.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process, such as the processing of materials using a pressure vessel in the absence of a supercritical fluid, as evidenced by U.S. Patent No. 2,947,609 to Strong.

Inventions I and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and

Art Unit: 1764

materially different apparatus (MPEP § 806.05(g)). In this case, the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product, such as a synthetic diamond product from a carbonaceous material, as evidenced by U.S. Patent No. 2,947,609 to Strong.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, such as the process for producing single crystals of aluminum nitride at or near atmospheric pressures, as taught by U.S. Patent No. 3,607,014 to Huml.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, the search required for Group I not required for Group II or III, the search required for Group II not required for Group I or III, and the search required for Group III not required for Group I or II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1764

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
